WRITTEN COMMENT CARD - PORTLAND HARBOR SUPERFUND SITE

To: EPA Region 10, Portland City Council, and Congressional Representatives

Comments: (use back if needed)

I am astounded that after all this time knowing we have a superfund site in the Willamette River that such a modified cleanup is being considered. Cleanup of all contaminants including PCBs, upland & upriver sources, is important because monitored natural recovery is inadequate response for contaminants that do not degrade. We need to look at emerging technologies to treat dredged materials in river as well as riverbank contaminants to restore lost habitat for fishing, boating, and water safety sports as well as compliance with drinking water & surface water standards. Water is one of our most valued resources in the Willamette and we will need this resource if global warming continues as expected.
